
Usage

Connect the Elgato Video Capture hardware to your computer and launch the Elgato Video Capture application. A video capture assistant will walk you through the entire process of capturing video and transferring it to your selected destination.

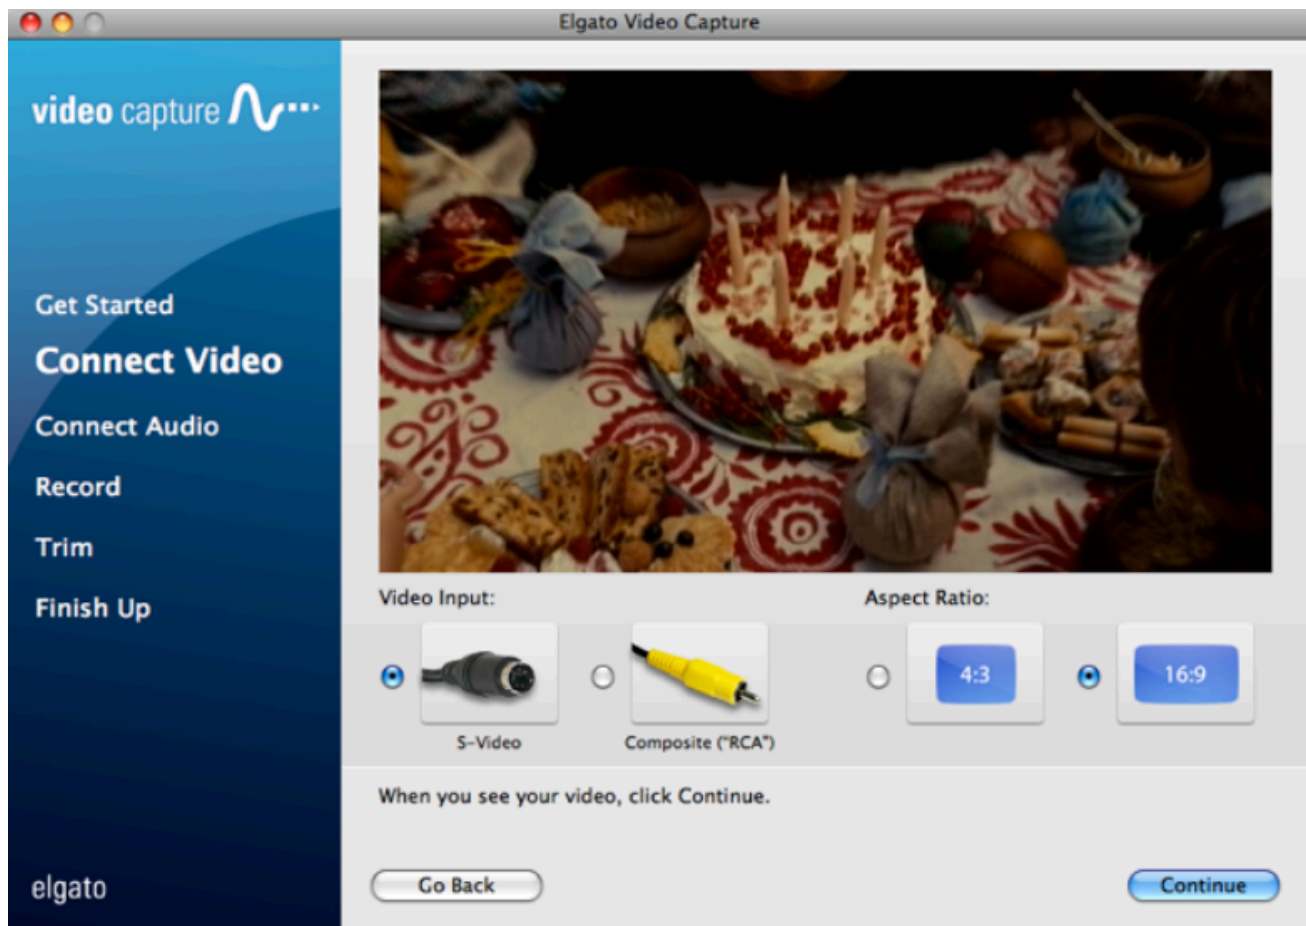

In the first screen that appears, you'll be asked to name your movie, and specify its approximate duration.

Connect Video

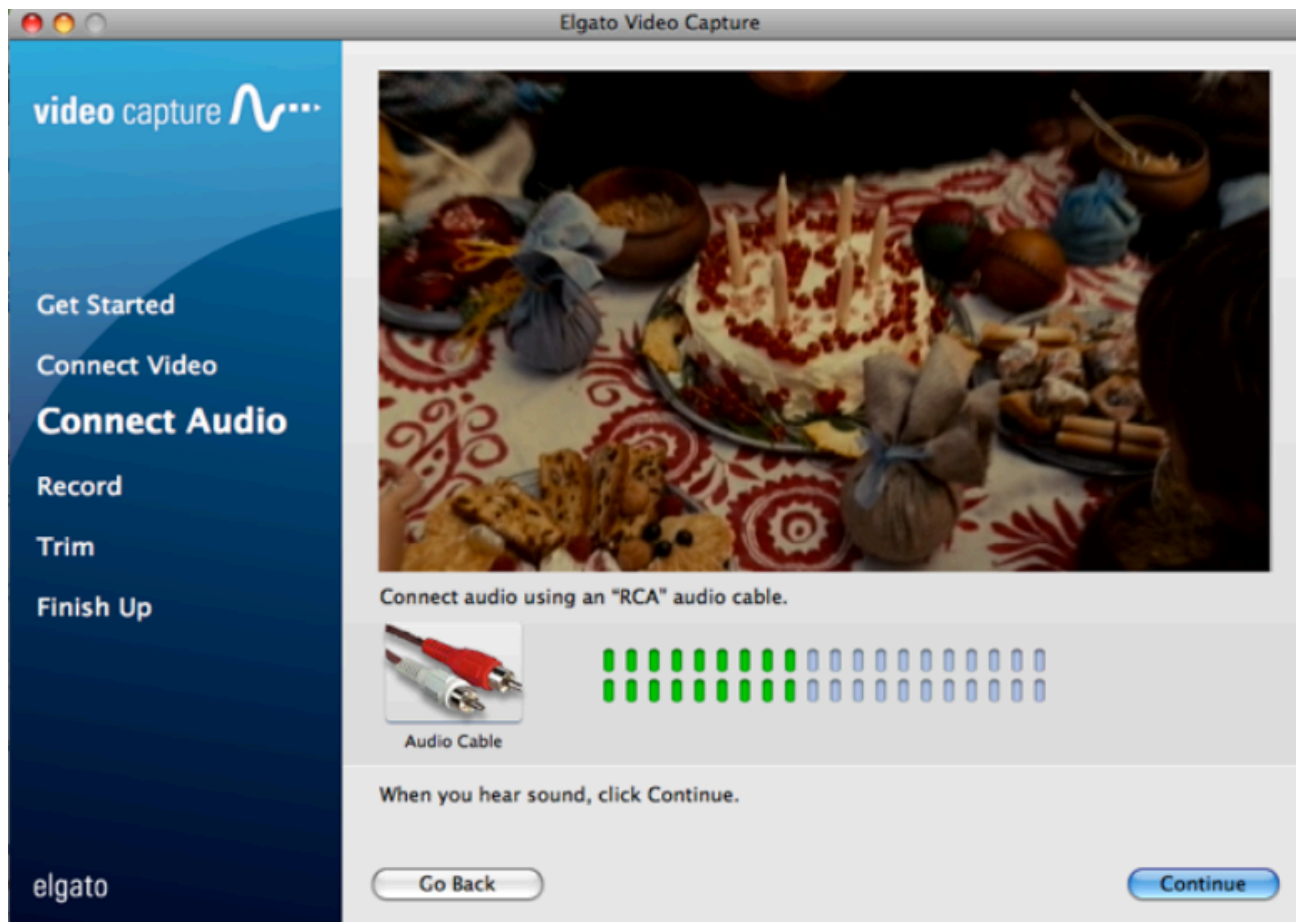

Next, start playing back your video source and connect its output to the Elgato Video Capture. Choose the appropriate input (either the S-Video or Composite "RCA") using the radio buttons until you see your video playing.

You can also select the desired aspect ratio, either 16:9 or 4:3. The aspect ratio should match the output of the source video.

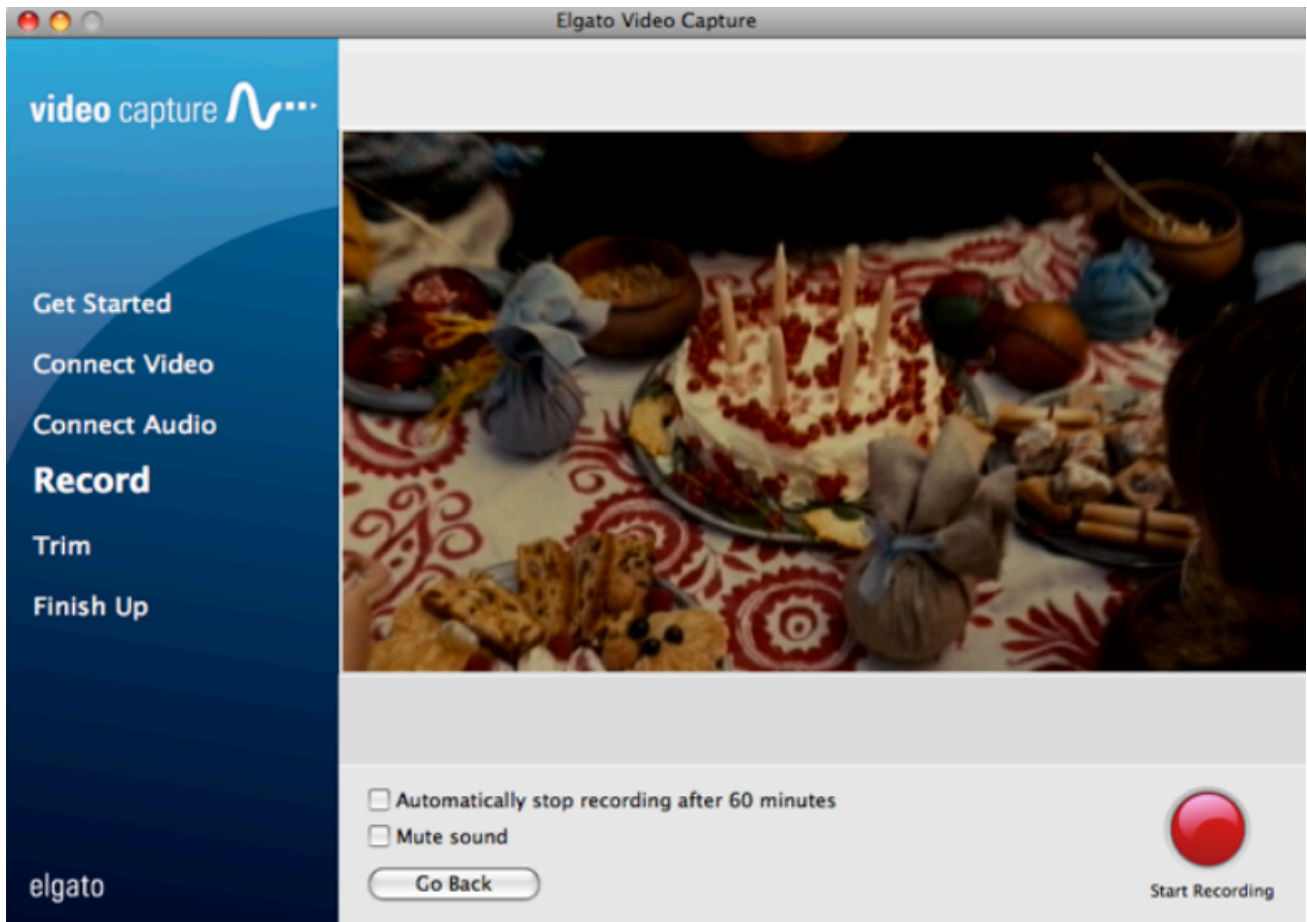

Connect Audio

Next, connect your video source's audio outputs to Elgato Video Capture. Click "Continue" once you hear sound through your computer's speakers. If the volume is too loud, the meter will turn red, which is a sign of distortion. It is recommended to adjust the volume so that the meter does not turn red.

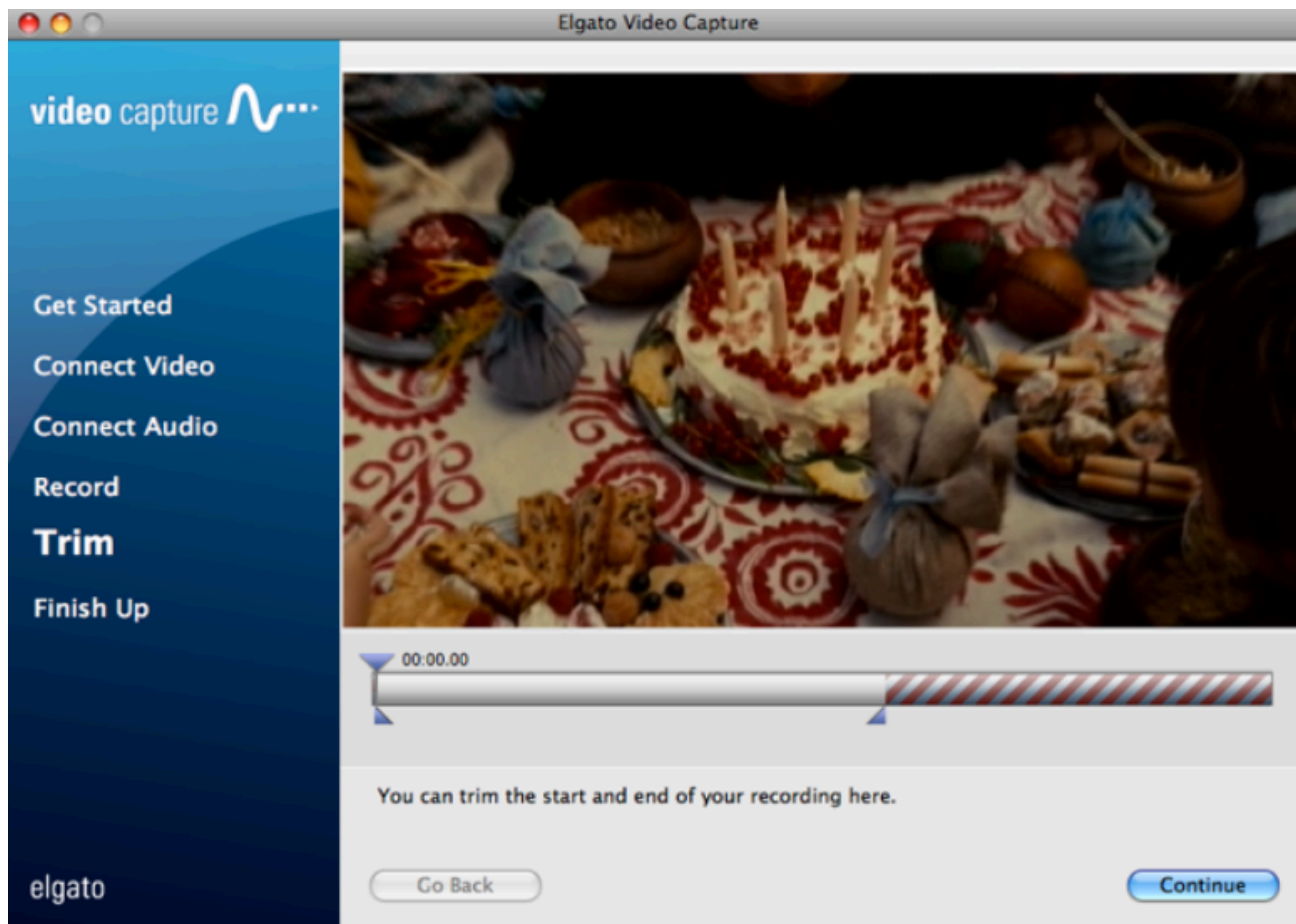

Record

Finally, set your video source to the beginning and start playing it back. Click the "Start Recording" button. When you are done, click the "Stop Recording" button, or let the Elgato Video Capture software stop recording automatically.

Trim

After the recording is complete, you can trim the beginning and end of the video in the editor to remove any unwanted video. After the desired video has been trimmed, click the “Continue” button to finalize the edit.

Play Back, Share, and Export

The Elgato Video Capture software saves the captured movie to the Movies folder (Mac) or Videos folder (Windows). The default save location can also be changed in the Elgato Video Capture Preferences.

After the video has been saved, you can select whether:

- To play your video in QuickTime (Mac/Windows) or Windows Media Player (Windows)
- Add it to your iTunes library (Mac/Windows) or to Windows Media Player's library (Windows)
- Edit it with iMovie (Mac) or Windows Live Movie Maker (Windows)
- Or upload it to YouTube.

If the video is added to iTunes, the next time you connect your iPod, iPhone, or iPad, iTunes will synchronize the video to the device.

If you would like to create a new recording, simply press the “Again” button and the assistant will start over from the beginning. If you are finished recording, press the “Quit” button to exit the assistant.
